

Game cheat Noob Guide -v1

By Hackers House

This is a simple book .Made for the purpose of teaching how does memory scanning helps in cheating games and what are the basic way of cheating games with simple memory scanning..This book will teach you how to learn rather then teaching all process.

Only for educational
purposes

For Whom This Book Is

This Book Is for Complete noob who haven't even hacked coins in subway suffers from lucky pacher. Which is the most easy way and almost everybody have done it.

It means this book is good for starting from 0.

What is the purpose of this book

To give you idea of what is memory scanning and how are game cheats made without any programming knowledge . And make an simple automated script for game cheats

This is Book Version 1 . Version 2 will have a lot more than this . This is just a quick simple guide.

What are game cheats

Changing anything in game to get advantage or to go out of limitation made by developer is game cheating.

Game cheats are mainly of 2 types . One Of them is internal hack and another is external hacks. In internal hack we change some values inside game to get hack working whereas in external hack we scan the memory of game and make an seperate hack injector like esp hack which will show the location of players their health and many more.

Internal hack :- Antina hack possible by changing the size of head. To find The location of opponent.

External hacking :- an esp which scannes memory and draws lines over enemy. Difficult to detect by game and safer.

But external hacks needs more RAM and memory of device . so the most popular are internal hacks in Smartphone and external hack in pc.

We are going to cheat some games in smartphone and make automated script.

How To Start Cheating in games:-

Cheating in game must be done process to process for good learning from basics. Directly trying to bypass and fool anticheat is an stupid act. Never learn game hacking in a game with anticheat.

1. Hack coins in more than 10 offline games.
2. Use an script made by Others and try editing them.
3. Find some known value and make an simple script by yourself .
4. Find Unknown values.
5. Make an script with your own value.
6. Try bypassing anticheat.

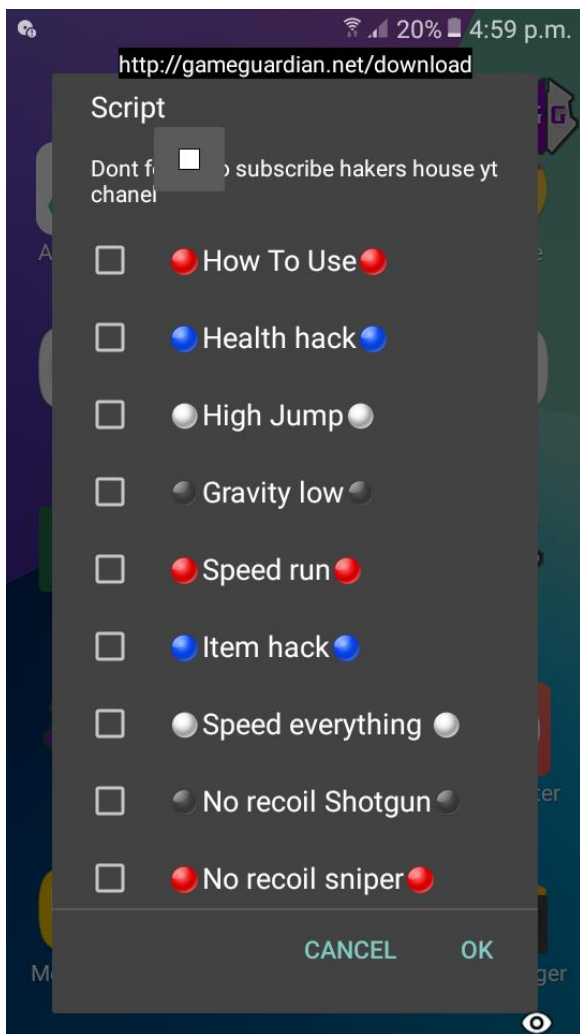

You can get a video tutorial about finding values

here :- <https://youtu.be/H60VaumH1rE>

making script:- <https://youtu.be/vlJQdQw13Qg>

advance script:- <https://youtu.be/mXsQG0kUI0Q>

A script will look like this after we make it:-

Game hacking tool:-

This is the main tool from which we are going to cheat is game guardian . It can be used in rooted and non rooted both device. You can download it from from their official and join a big forum for helps.

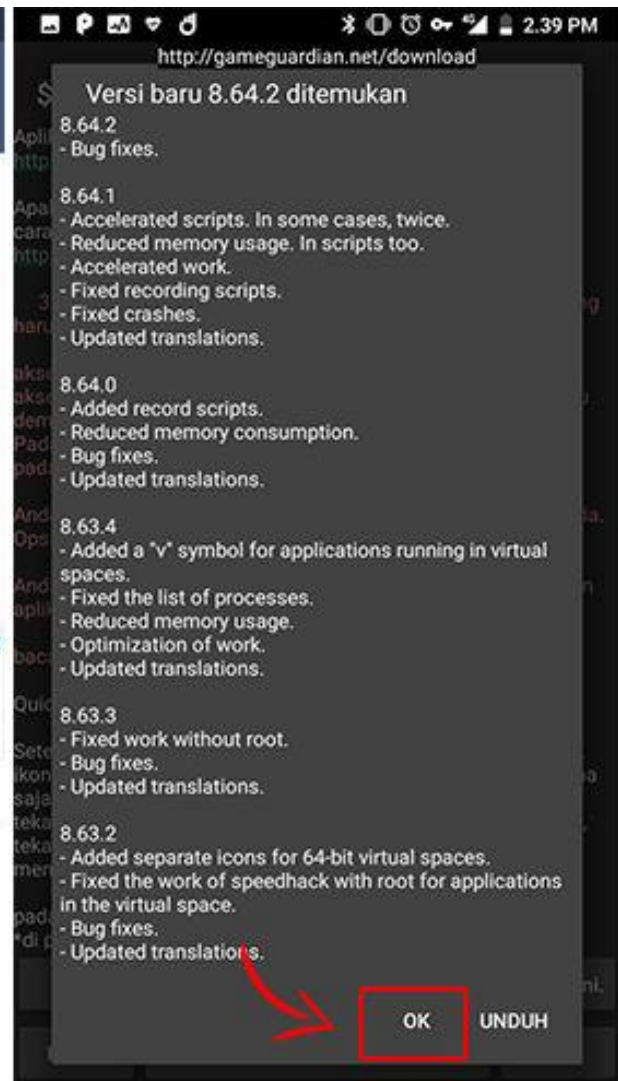

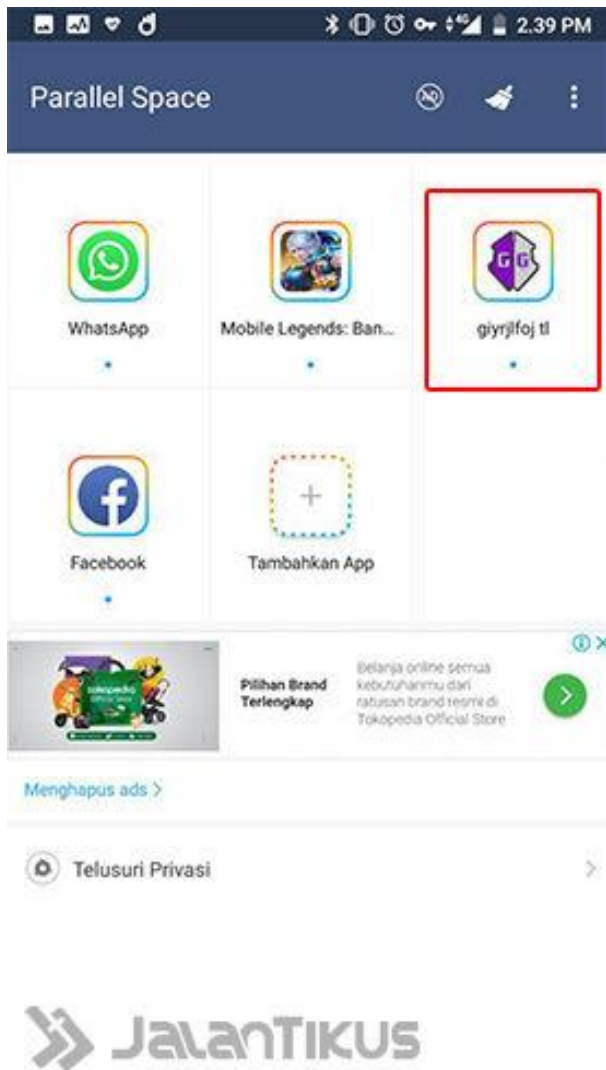

Download :-

<https://gameguardian.net/download>

How to use In No root:-

<https://youtu.be/IvhjhOUKidg>

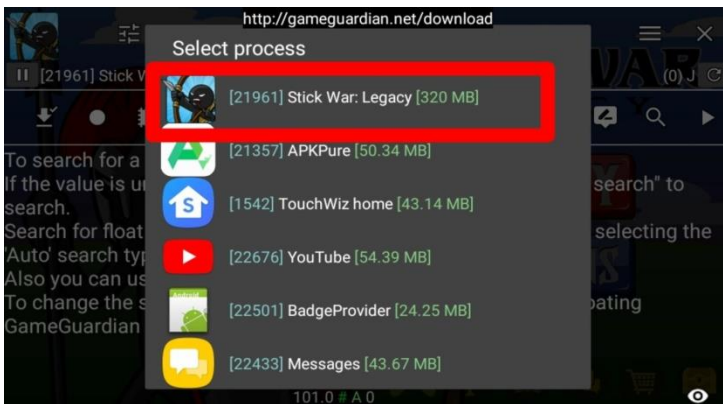

To use this tool in no root we need to download a vertual space and install gameguardian and your game inside the vertual space like this.

Now we are ready for hacking games. So open your game and game guardian same time. We are taking this game as example . you can try with us.

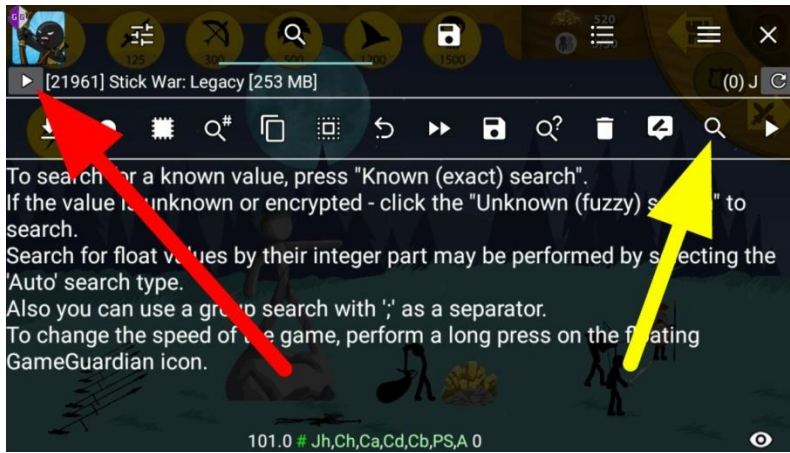

After opening game select your process.

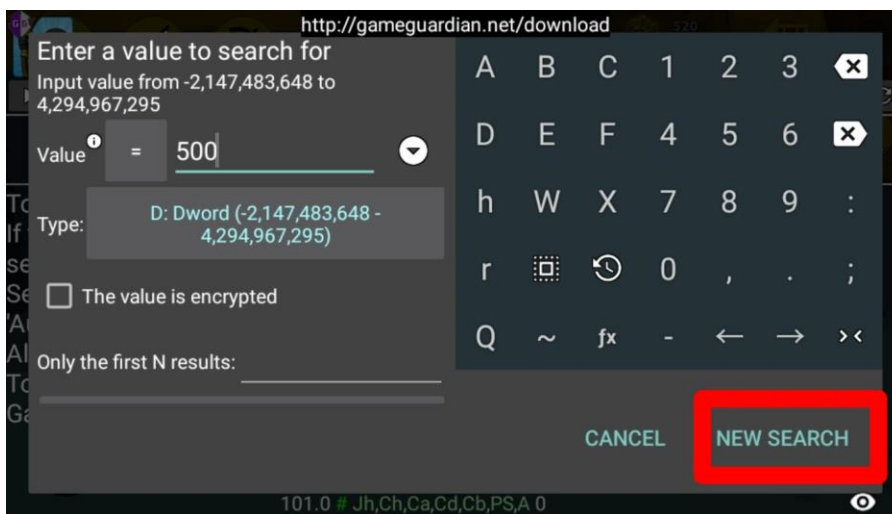

now count number of your coins.

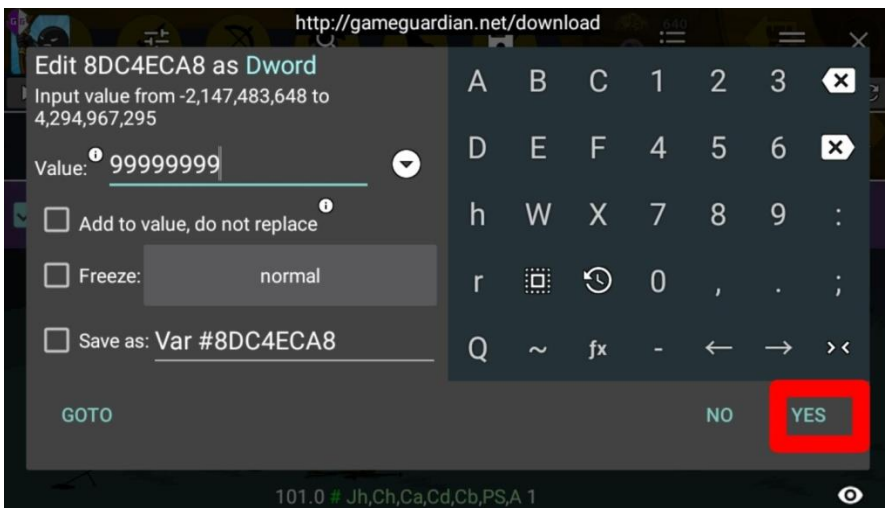

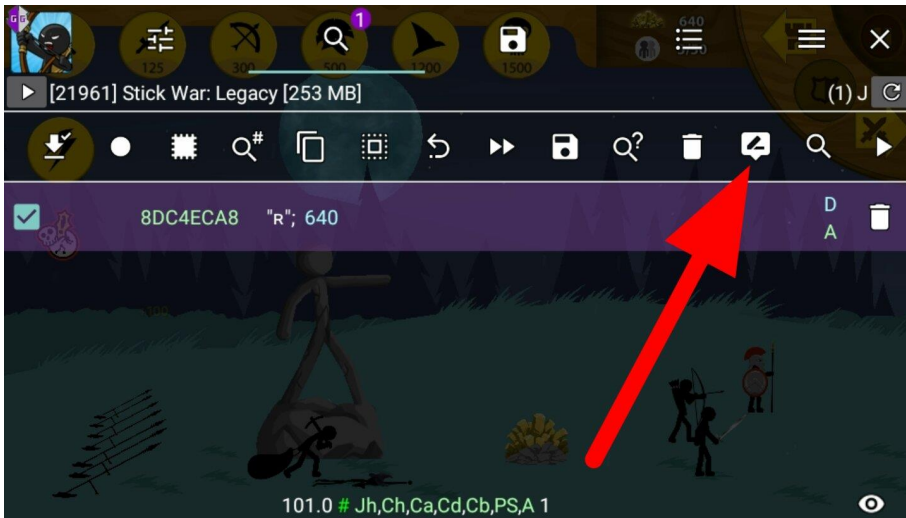

pause game and tap search option

type your coin number and do new search

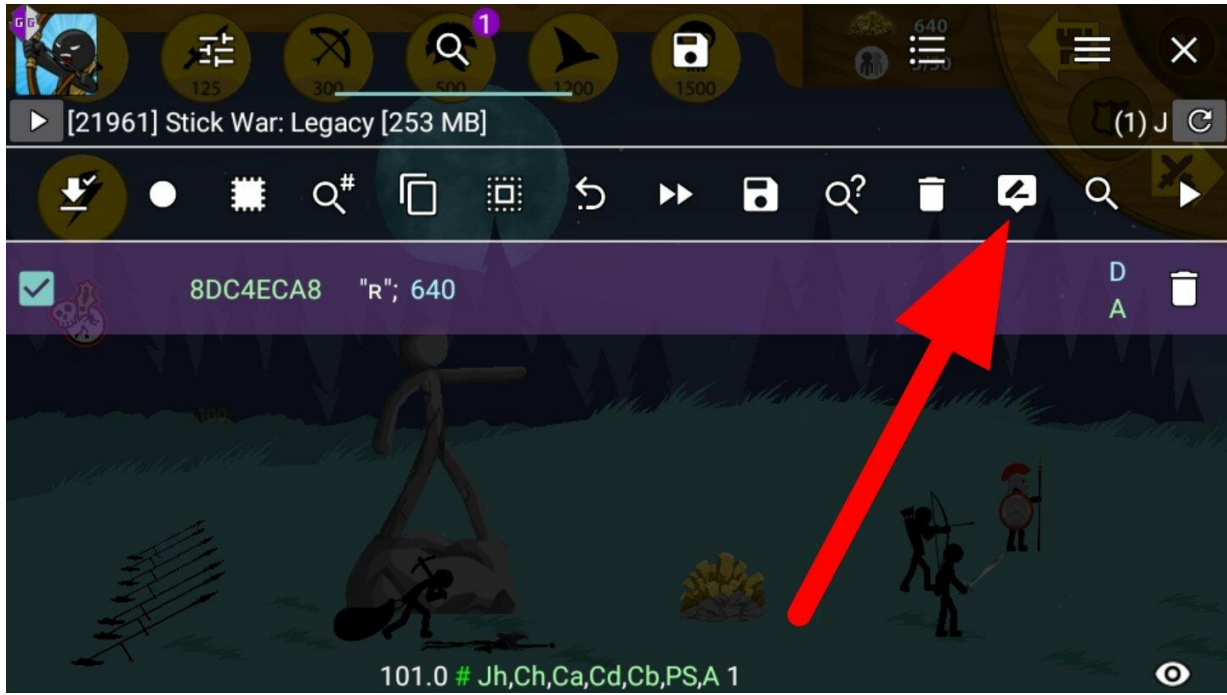

again go to your game and change the no of coins you have and search again until you find a single value.
then edit it.and tap yes.

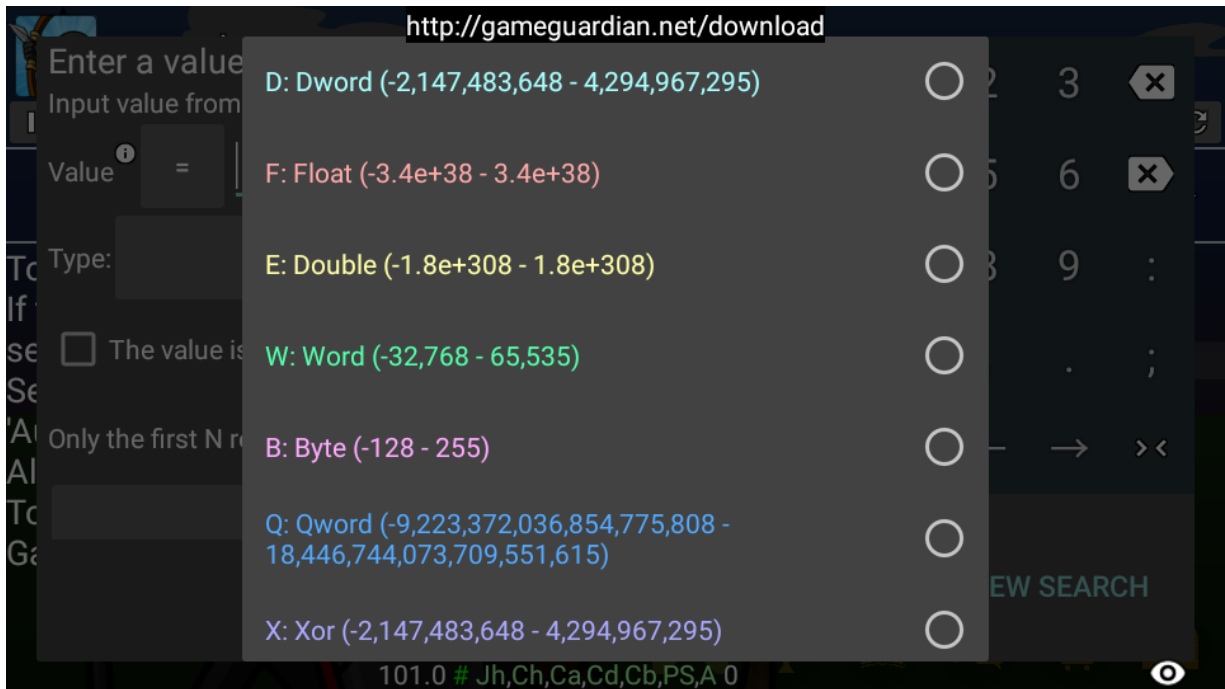

Boom Done you hacked some coins.

Now we will make an automated script which we can run using play button in gg.

Ok so we start with two letters. Here you will see D\A at last of values which is the basic thing we need to make script.

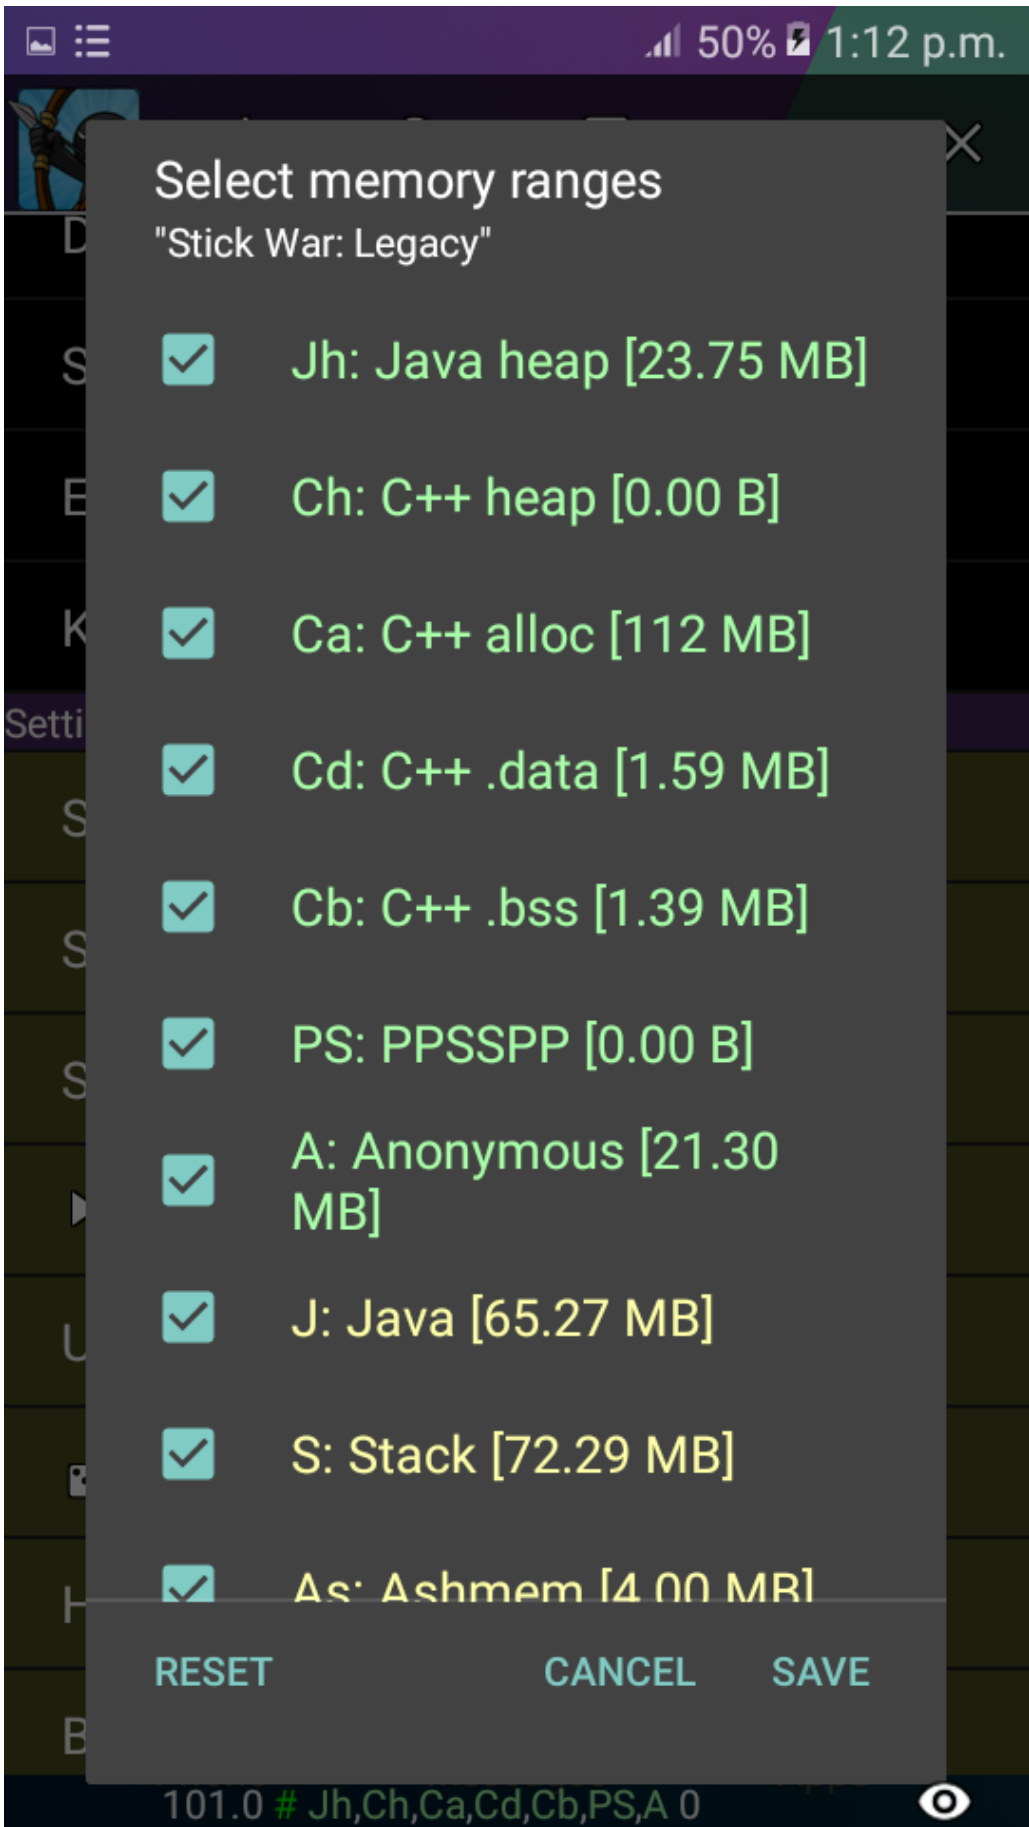

Here D means dword .and similarly others are.

If we dont find value in dword then only we will search auto.

and A means anomomys. and here are other ranges.

if you dont find values . then only select other memory ranges.

if u do

Select memory ranges

"Stick War: Legacy"

- Jh: Java heap [23.75 MB]
- Ch: C++ heap [0.00 B]
- Ca: C++ alloc [112 MB]
- Cd: C++ .data [1.59 MB]
- Cb: C++ .bss [1.39 MB]
- PS: PPSSPP [0.00 B]
- A: Anonymous [21.30 MB]
- J: Java [65.27 MB]
- S: Stack [72.29 MB]
- As: Ashmem [4.00 MB]

101.0 # Jh,Ch,Ca,Cd,Cb,PS,A 0

Now we will write this in first line which gives message to user.

```
gg.alert('Suscribe My Cahnel Hackers House')
```

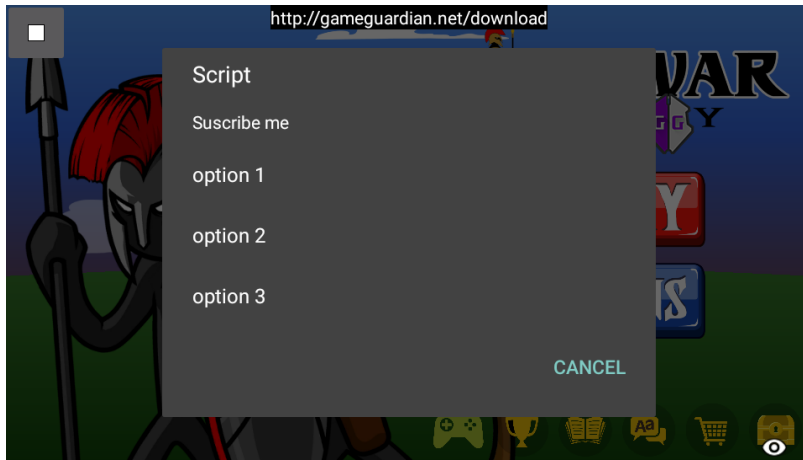

now type this for making menu.

```
::START::
```

```
menu=gg.choice ({'option 1','option 2','option  
3'},nil,'Suscribe me')
```

```
if menu ==1 then
```

now for making the hack work.

we type this code because we found A EARLIER.

```
gg.setRanges(gg.REGION_ANONYMOUS)
```

our coins was 500 at first and we found it in dword so we write

```
gg.searchNumber('500',gg.TYPE_DWORD)
```

now .

```
gg.getResults(100)
```

```
gg.editAll('9999999',gg.TYPE_DWORD)
```

our coins will be edited to 99999999. hence hacked.

at last type end to finish this . you can add other hacks in other options.

so our final script is this.

```
gg.alert('Suscribe My Cahnel Hackers  
House      ')
```

```
::START::
```

```
menu=gg.choice ({'option 1','option 2','option  
3'},nil,'Suscribe me')
```

```
if menu ==1 then
```

```
gg.setRanges(gg.REGION_ANONYMOUS)
```

```
gg.searchNumber('500',gg.TYPE_DWORD)
```

```
gg.getResults(100)
```

```
gg.editAll('9999999',gg.TYPE_DWORD)
```

```
end
```

```
if menu ==2 then
```

```
gg.setRanges(gg.REGION_ANONYMOUS)
```

```
gg.searchNumber('300',gg.TYPE_DWORD)
```

```
gg.getResults(100)
```

```
gg.editAll('9999999',gg.TYPE_DWORD)
```

```
end
```

```
if menu ==3 then
```

```
(Type your code here)
```

end

now we made a simple script . Now there is a very big journey ahead of you and you have to try to get success. now you need to know what is ranged search.

let us consider your coin value changes from 1 to 10000000. to search anything between them we will use this.

1~10000000

now your script will be .

```
gg.searchNumber('1~10000000 ',gg.TYPE_DWORD)
```

there are many things you can do with game guardian . Learning group search . finding hacks like aimbot is still left but this is a simple noob guide . little advance and in detail things will be in book v2 .

Now I Will End this Book With some usefull tips. Our contacts will be at last so contact us for V2 advance book.

Now to practice and learn game hacking you can try this games. we have tons of tutorial on telegram chanel so check out that.

1. hill climb racing ---- Cb dword

2. hitmasters ---- Jh float

3. rope frog ninja hero - strange gangster vegas

----- Anonymous Qword

4. devil eater ----- search for wepon amount and edit it to -999999.... example:- go to wepons --- find blade gun search for its value then edit all value to -99999999 (not more than 9 digits) then buy it . For silver go to costumes and do group search example choose any 3 coustume ...in my i choose 3 coustume and now i will search their value like this 1500;2000;500 (dword Anonymous) after search edit all values to -99999999 then buy it enjoy.. .

5. ultimate football ---- Anonymous Dword

do group search just like devil eater .. in this search
50;125;2 (you will find in traning store) and edit all
values to -9999999

buy and enjoy ...

6. idle miner tycoon

---- double Anonymous

7. hunter assassin

----- Ca dword

8. turbo driving racing 3D

----- Dword Anonymous (try to change in looby it will
work (money))

9. traffic rider

go to garage go to last bike (red colour)

search for price 1500000 , level to unlock 49

power 300 , handling 290 , breaking 285

search like this 1500000;49;300;290;285

after search edit 49 to 0 (dword value) or values for changing level to unlock bike , edit 1500000 dword to -99999999 for cash then buy it

for gold

find bike which can only be unlocked by gold

in my case i will hack 700 gold bike

process is same as cash

700;41;250;260;220

then change 41 to 0 and 700 to -99999999

then buy it (you will see so many value but edit only dword values)

10. dr driving

----- Dword jh

start game

collect 1 coin and seach 1(while playing slow your car) now collect 2 coin then search 2 then 3 coin then search 3 then edit value to 99999 donot go more than 5 values(99999). now die in game silver is hacked

We will unlock car which can only be unlocked by gold so... go to car section .

what we have to is group search of all car which cost gold

100D;100D;200D;200D;300D;300D;400D;400D;500
D;10D;20D;20D;30D;30D;40D;40D;50D;50D;60D;60
D;80D:1441

these are the cost of all gold cars :- like 100 , 200, 300
all the are cost of cars united

search the code (dwords) i have given then edit all
values to -1 . gold value will be converted into silver
then you can buy all gold cars for 1 silver coin.

.Hacking all games have same process practice
hacking coins in 10+ games then only try v2 books.

Quick tip:-

1. Turn off mobile data or internet before hacking
any game.
2. can't hack coin then hack items prize.
3. don't edit with too much high value . other wise
game will crash.

Please Contact Us for V2 Advance book.

Theses are some codes you can use in script;

1. `gg.copyText("Your TEXT")` -- Copy to clipboard
2. `gg.clearResults()` -- Clear search results for new search
3. `gg.toast("Hack activated")` --to give message to user
4. `gg.sleep(3000)` -- pause script run for some time
5. `gg.setSpeed(5)` --Activate speed hack

6. Allow user to input value

```
input=gg.prompt({'Your Value'},
```

```
{[1]='222'},
```

```
{[1]='number'})
```

```
gg.searchNumber(input[1],gg.TYPE_DWORD)
```

```
gg.getResults(100)
```

```
gg.editAll('9999999',gg.TYPE_DWORD)
```

```
7.. put password in script
r="234"
R=gg.prompt({"type password"})
if R[1]==r then
menu=gg.choice({"goat"})

else
gg.alert("wrong password")
end
```

8..remove unwanted results

```
gg.searchNumber("100", gg.TYPE_FLOAT, false,
gg.SIGN_EQUAL, 0x9A000000, 0x9Affffff, 0)
r = gg.getResults(10)
gg.removeResults(r)
gg.getResults(150)
gg.editAll("999999999",gg.TYPE_FLOAT,FREEZE
_NORMAL)
```
